**Subject:** Lab results from April Pavilion trip

Hi Dave,

Rick inquired about when all the lab results would be ready.

All samples over here have been extracted, however, I would like to extract a couple samples one more time due to low recoveries. That will happen next week. I am gone next week at a conference, so I think when I get back the following week, I'll have time to quickly throw those on the mass spectrometer and hopefully have the data to you by Friday June 1. But definitely no later than the following Friday. The Reg 3 SOP glycols verification study occurred right in the middle of these samples.

Is that timeline acceptable?
